## 1 Installing New Libraries

```
[ ]: !pip install SimpleITK
```

Requirement already satisfied: SimpleITK in  
/Users/jamesleon/anaconda3/envs/IA\_Verano/lib/python3.11/site-packages (2.3.0)

## 2 Importing needed libraries

```
[ ]: from glob import glob
import os
import matplotlib.pyplot as plt
import sys
#from google.colab import drive
import SimpleITK as sitk
from torch.utils.data import Dataset, DataLoader
from torchvision import transforms, utils
from ANTsPy import ants
import pandas as pd
import nibabel as nib
import seaborn as sns
import numpy as np

%matplotlib inline
```

## 3 Google Drive configurations

```
[ ]: drive.mount('/content/drive',force_remount = True)

FOLDERNAME = 'Tesis'
assert FOLDERNAME is not None, "[!] Enter the foldername."

# Now that we've mounted your Drive, this ensures that
# the Python interpreter of the Colab VM can load
# python files from within it.
import sys
```

```

sys.path.append('/content/drive/My Drive/{}'.format(FOLDERNAME))

# Some more magic so that the notebook will reload external python modules;
# see http://stackoverflow.com/questions/1907993/
  ↳ autoreload-of-modules-in-ipython
%load_ext autoreload
%autoreload 2

```

Mounted at /content/drive

**3.0.1 Disclaimer:** Declaring the sys pathway isn't necessary if the working directory is the same as the root directory, which is true for all local runs

## 4 Train Dataset

### 4.1 Frames

#### 4.1.1 Run this cell in case it's a colab

```

[ ]: #generate a root path
root_path = '/content/drive/MyDrive'
#join with the dataset path
my_data_path = f'{root_path}/Tesis/Dataset' # change accordingly
#generate a sorted list of the patients' paths only the first frames
patient_dirs_tr = sorted(glob(f'{my_data_path}/Train/**[0-9].nii*'))
#check the number of paths
print(len(patient_dirs_tr))

```

#### 4.1.2 Run this cell instead of the previous one for a local directory

It is looking for all .nii files in the 'database/training/' directory through the reg in the glob func()

```

[ ]: #generate a data path
my_data_path = 'database' # change accordingly
#generate a sorted list of the patients' paths only the first frames
patient_dirs_tr = sorted(glob(f'{my_data_path}/training/**[0-9].nii*'))
#check the number of paths
print(len(patient_dirs_tr))

```

200

### 4.2 Metadata

```

[ ]: def metadata(paths, name):
    '''
    Captures the metadata from images and store in csv file
    Arguments:
    paths (list): list of paths where the images are stored
    '''

```

```

name (string): name of the csv file that is going to be save
'''
